The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid; (2) a host cell containing the vector; (3) an isolated converse of the polypeptide whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the containing the polypeptide; (6) inhibited by the containing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway in which a proliferation required gene or required for compound that influences the activity of containing agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling the extent compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for compound that on a culture or collection of strains; or (13) identifying the target of a compound that inhibits proliferation of contains, or for screening homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational containing proteins or screening for homologous nucleic acids required containing proteins or screening homologous nucleic acids required containing proteins and contained acids are useful for containing proteins. The sequence data for this patent did not form part of the printed specification, but was obtained in clettornic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 14; SEQ ID NO 7167; 1766pp; English.

Novel recombinant phytase having modified phytase activity comprising modification of amino acid residues in mature Escherichia coli phytase designated EBC18B2, useful as feed additive.

Claim 19; Fig 21; 107pp; English.

The invention relates to recombinant modified AppA phytases having combified phytase activity. The AppA phytases are derived from a mature Escherichia coli AppA phytases designated EBC18B2 (see ADL16120), and comprise substitutions at least one of residues 26, 43, 46, 54, 73, 113, 2126, 184, 228, 384 or 410, or at a residues 26, 43, 46, 54, 73, 113, 2126, 184, 228, 384 or 410, or at a residue located within 5 residues of those listed above. The invention also encompasses polynucleotides composed a modified AppA phytase and which further encodes a secretion constructs, vectors and host cells (preferably Bacillus subtiliss) comprising the modified AppA phytases. The invention also discloses a method of producing an enzyme having phytase activity; a method of producing a heterologous conjugation and animal feed activity in Bacillus subtilis; reducing the colypeptide having phytase activity; a method of producing a heterologous conjugation animal feed comprising cells, spores or plant parts, compatified AppA phytase; and animal feed comprising cells, spores or plant parts, compatified AppA phytases are useful as an animal feed additive, modified AppA phytases. The modified AppA phytases are useful as an animal feed additive, an important source of phosphorus. The modified AppA phytases also have can be used in the isolation and can phytate enzymes for extracting phosphorus and so have can be used in the isolation and cappalications. For example, they can be used in the isolation and recovery of rare metals to produce lower phosphate homologs of phytate,

It has improved protease c stability at low pH. The recombinant phytase is useful for improving the nutritional value of phytate-containing foodstuffs and subsequently c improving the growth performance of an organism that consumes it, in c treating animal digestive systems, in feed treatment processes and for in c vitro purposes related to research, discovery and development. They are c also used for generating recombinant digestive system life forms, for c producing or manufacturing alcoholic and non-alcoholic drinks based on c the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of environmentally harmful chemicals that c are traditionally used in the pulp and paper industry is desired and in c the reduction or possible elimination of the need for mineral c supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed. C The present sequence is a DNA encoding E. coli appA phytase wild type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New bacterial phytase for e.g. improving the nutritional value of phytate -containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.

/product= "Phytase'

```
The invention relates to an isolated Escherichia coli polynucleotide encoding a phytase enzyme appearing as ADA19450 and having amino acids combification from W68E, Q84W, A95P, K97C, S168E, R180Y, N226C or Y277D. CC Also included the E. coli appA gene ADA19449 (or an oligonucleotide containing foodstuff by contacting nutritional value of a phytate-containing foodstuff by contacting the phytase-containing foodstuff with a pure phytase enzyme mutated phytase (where the phytase enzyme catalyzes the liberation of inorganic phosphate from the phytate in the phytate-containing foodstuff), a method to produce an animal feed containing a microbial phytase (comprising culturing the plant cell, plant part or CC plant under conditions where the nuclectide sequence is expressed and CC converting the plant cells, plants or plants into a composition for animals (comprising the plant seeds, plant CC cells, plant parts or plants in admixture with a phytate-containing codstuff), a method to treat a human or an animal able to benefit from CC comprising administering to the human or animal the plant seeds, plant CC cells, plant parts of a transgenic plant which is modified to centering to the human or animal the plant seed, plant CC cells, plant parts of a transgenic plant which is modified to centering a phytase enzyme, a transgenic non-human organism whose genome CC comprising a heterologous nucleic acid sequence encoding a polypaptide to animal feed and for enhancing digestion in humans and animals. The converted method improves thermal tolerance and protease stability. It calso improves the feeding value of phytate rich ingredients. The present sequence represents the E. coli kil appA gene encoding wild-type phytase.

The invention discloses a new isolated or recombinant nucleic acid which encodes a polypeptide having a phytase activity. Also claimed is a nucleic acid probe, an amplification primer sequence pair, an expression cassette comprising the nucleic acid, a vector comprising the nucleic acid, a vector comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic acid, an antisense oligonucleotide, inhibiting the translation of new manage in a cell, a heterodimer comprising the polypeptide and
                                                                                                                       New nucleic acid encoding a polypeptide having in improving the feeding value of phytate rich in phytate digestion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Phytase; food supplement; enzyme delivery matrix; soybean meal; thermotolerance; thermostability; kernel; phytate; myo-inositol-hexaphosphate; inositol; inorganic phosphate; thermotolerant; feed value; digestion; gene; ds; appA.
                                                                                                   Example
                                                                                                                                                                          P-PSDB;

The phytase CC activity comprises catalysis of phytate (myo-inositol-hexaphosphate) to is useful in improving the feeding value of phytate rich ingredients or CC as an aid in phytate digestion. The sequence presented is the DNA CC encoding the Escherichia coli appA phytase.
                                                                                                                                                                                                                                                                                                     Local Similarity:

Pred. No.:
                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially csignificant mammals such as guppy, zebrafish, molly, swordtail, cc commercially farmed fish such as guppy, zebrafish, molly, swordtail, cc etc., in dough making and baking, in dietary aids for animals. The method CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli Kl2 appA phytase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               13-AUG-1997;

Sequence 3, Application US/10156660

Publication No. US20030103958A1

GENERAL INFORMATION:

APPLICANT: Short, Jay M.

APPLICANT: Kretz, Keith

APPLICANT: Garrett, Keith

APPLICANT: Garrett, James B.

APPLICANT: O'Donoghue, Eileen

APPLICANT: Mathur, Eric J.

TITLE OF INVENTION: PHYTASES, NUCLEIC ACIDS ENCODING THEM

TITLE OF INVENTION: AND METHODS FOR MAKING AND USING THEM

FILE REFERENCE: 09010-029007

CURRENT APPLICATION NUMBER: US/10/156,660
